

Web Systems

Part A: Design – (Figma)

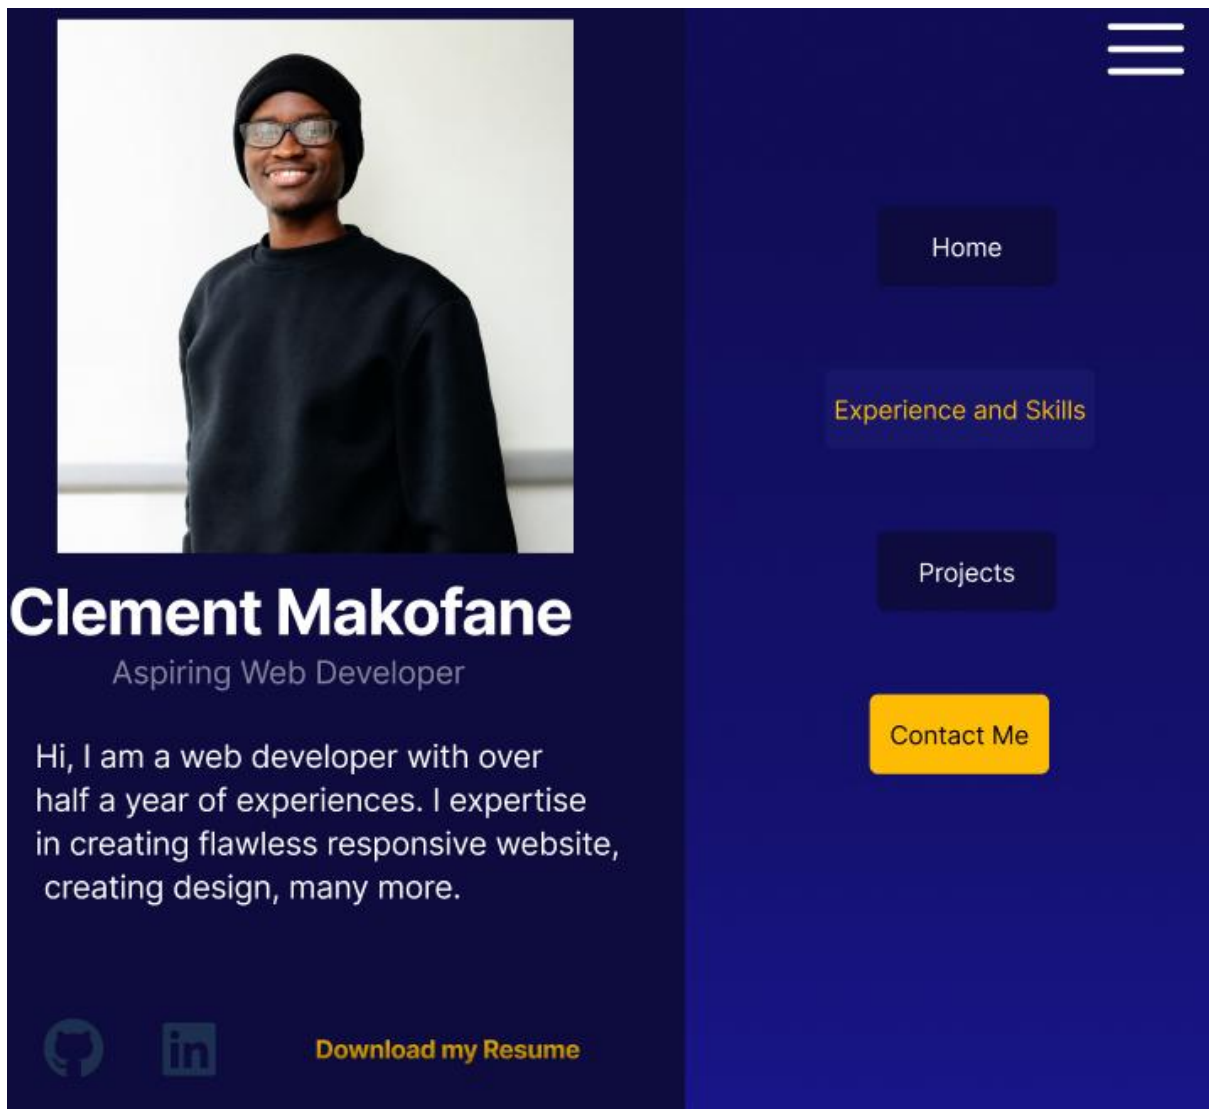

Landing page

Contact page

The contact page has a dark blue background. The navigation bar at the top includes links for 'Home', 'Experience and Skills', 'Projects', and a 'Contact Me' button, along with a sun icon. The main content area is enclosed in a light blue border and contains the heading 'Fill in the form to contact me'. Below this heading are four input fields: 'Name:', 'Email:', 'Inquiry type:', and 'Details of Inquiry:'. The 'Details of Inquiry' field is a larger text area with the placeholder text 'type your message here'. At the bottom of the form, there is a message '✔ Your inquiry has been successfully submitted.' and a 'SEND' button.

For (max-width: 860px, & 600px)

Part C: Reflection

I used the following websites for css and javaScript.

- W3Schools mostly for styling
<https://www.w3schools.com/css/default.asp>
- Font Awesome for icons styling
<https://docs.fontawesome.com/web/style/>
they have all the icons I needed for the portfolio, I relied on icons their since most of their icons are customable.

I adapted a lot of Youtube portfolios designs I came across, below are the most notable ones.

- WebDev Campus - <https://www.youtube.com/@WebDevCampus>
- Bedimcode - <https://www.youtube.com/@Bedimcode>
- Pro Coder - <https://www.youtube.com/@procoder09>

And lastly the

Two other sources are

- freeCodeAcademy
- SoloLearn (Which I have been using for quite a while now)

I think the new technique I have been mastering is the concatenation of tags if we have multiple of them, instead of just typing them one by one, using the following;

- (elementclass>element)(times *) number
(a.nav-Link>img)*4

```
(a.nav-Link>img)*4
```

```
<a href="" class="nav-Link"><img src="" alt=""></a>
<a href="" class="nav-Link"><img src="" alt=""></a>
<a href="" class="nav-Link"><img src="" alt=""></a>
<a href="" class="nav-Link"><img src="" alt=""></a>
```

It gives me this.

Which can be pretty handy.

And lastly it has to be <https://cssbattle.dev/> is a game that I have been playing, given html and a target picture using css. It has been pretty handy also.
